Excursions and Technical Insights

Getting insights into domains and application fields is very important for the ideation process in SIL. By searching for challenges in different domains that can be solved with the lab technology you can find your innovative product idea. Therefore, to start and support the imagination process there are some excursions resp. technical-oriented presentations in place. The excursions and presentations are provided by the companies, who sponsor SIL. You will get some insights into their daily work and possible challenges and problems they are faced with. The participation is voluntary (but highly recommended). Unfortunately, due to the pandemic situation this year only virtual presentations can take place. However, we have an exciting line-up for these presentations. The format is very interactive. There is enough time for questions and discussions with the company representatives. Invitations follow by mail.
